

Mohamad Zafir bin Nadzri

AI Integration & Full-Stack Developer · Tech Team Leader

zaf@zaf.my · [+60 11-2112 6869](tel:+601121126869) · github.com/zafmy · zaf.my · Shah Alam, Selangor, Malaysia

In short: 3 years leading a tech team · builds AI systems companies use every day · ships full-stack products end to end.

PROFILE

Final-year Computer Science student who has already spent 3 years leading a tech team in industry. I build AI systems that companies actually use: agent workflows, LLM integrations, and full-stack apps in Next.js and Nuxt.js. My rule is simple: AI should help people decide, not decide for them, so everything I ship keeps a human in control. Right now I split my time between enterprise work at Arunexa and AI research for a government project.

EDUCATION

Bachelor of Computer Science (CS230)

Universiti Teknologi MARA (UiTM), Shah Alam

Expected February 2027 · CGPA 3.06/4.00

- Academic coursework: March – July 2026.
- Industrial training: September 2026 – February 2027.

Sijil Professional Falak

Universiti Sultan Zainal Abidin (UniSZA)

2025

PROFESSIONAL EXPERIENCE

Team Leader, Tech Team

Arunexa Sdn. Bhd. (formerly Matmemorex Group Sdn Bhd)

2022 – Present (3 years)

- Built AI agent workflows and predictive models that now run inside the company's daily operations.
- Built the company's task and project management platform with Next.js and Nuxt.js, including real-time collaboration.
- Lead a team of programmers, AI engineers, and data analysts, usually across several projects at once.
- Keep the platform fast and stable as more of the company depends on it.
- Mentor junior developers on AI practices and code quality.
- Sit with business teams, work out what they need, then build it.

Research Assistant

Accounting Research Institute (ARI), Universiti Teknologi MARA (UiTM)

- Work on an AI research project for Malaysia's Ministry of Home Affairs: the *Indeks Keselamatan dan Ketenteraman Awam* (IKKA), a public safety index.
- Fine-tuned a language model on IKKA domain knowledge so it can answer questions about public-safety reference material.
- Built that model into the IKKA web app as a chatbot, so senior officials can get quick answers and pull data without digging through reports.
- Read and summarise AI research papers relevant to public-safety indexing for the team.
- Work with academics and government stakeholders to turn research findings into working tools.

TECHNICAL SKILLS

AI & Machine Learning: Agentic AI Systems, Multi-Agent Orchestration, LLM Fine-Tuning, Predictive Modelling, MCP Tooling, Human-in-the-Loop Workflow Design

Full-Stack Development: Next.js, Nuxt.js, React, Vue.js, Node.js, TypeScript, GraphQL, RESTful APIs, Tailwind CSS, Real-time Systems

Backend & Data: Python, PostgreSQL, Prisma, Drizzle ORM, SQLAlchemy, Alembic, Zod, Firebase, Database Design

Infrastructure & Tooling: Docker, Hetzner Cloud, Clerk, Git, Cloud Platforms, System Architecture

Specialised Programming: MQL4, MQL5, Pine Script, Financial Systems Development

Beyond Code: Leading teams, planning and running projects, research work, explaining technical things to non-technical people

Languages: Malay (Native), English (Professional)

KEY PROJECTS

Enterprise AI-Powered Management System

Arunexa Sdn. Bhd.

Next.js · Nuxt.js · Firebase · AI/ML

- The company's internal task and project management platform, with AI built in.
- Predicts resource needs and project timelines so managers can plan ahead.
- In daily use across the company; improved release by release based on user feedback.

Market Agentic — AI Agents for Market Analysis

Python · TypeScript · LLM Providers · Agent Orchestration · PostgreSQL · Telegram · Market Data APIs

- A team of AI agents that reads market data, news sentiment, and risk signals, then writes a trading brief.
- When the agents disagree, the system says NO_TRADE instead of forcing a call. Honest beats confident.
- Delivers briefs over Telegram with a full audit trail. A human always makes the final decision.

Smart Pulse — Private AI Trading Intelligence Platform

Next.js · TypeScript · PostgreSQL · Drizzle ORM · Clerk · MetaAPI · AI Provider APIs

- A private dashboard that puts market context, live account data, and AI analysis on one screen.
- Separate views for scalp, intraday, and swing trading, each honest about when signals conflict.
- The AI advises; it never trades on its own.

IKKA — Public Safety AI Analytics

TypeScript · GraphQL · Prisma · PostgreSQL · Next.js · LLM Fine-Tuning · Chatbot · Prophet

- Research platform that organises public-safety reference data and makes it searchable with AI.
- Fine-tuned a language model on IKKA domain knowledge and built it into the app as a chatbot: senior officials ask a question, it answers with reference material and data.
- Built full-stack features and data pipelines with TypeScript, GraphQL, Prisma, PostgreSQL, and Next.js.
- Added forecasting (Prophet) so the team can see trends, not just records.

AI Agent and Claude Workflow Research

Claude AI · AI Agents · MCP Tooling · AI-Assisted Development · Workflow Automation

- Ongoing research into AI agents that connect language models to tools, APIs, and internal systems, with human approval steps built in.
- Hands-on testing of Claude, multi-provider LLM setups, and MCP tooling to find what holds up in real work.
- Prototypes and write-ups on what makes automation reliable enough to trust with real business tasks.

School Management & LMS Platform

Next.js · React · TypeScript · Prisma · PostgreSQL · Clerk · Tailwind CSS · Zod

- Full-stack platform covering school administration and learning management in one place.
- Secure sign-in with Clerk, Prisma/PostgreSQL data models, Zod validation, and responsive React UI.
- Separate dashboards for admins, teachers, students, and parents, each seeing only what they need.

Carianakbulan.com — Gamified Crescent Sighting Platform

Personal Research Project

Next.js · Gamification · Interactive Simulation

- A public website that teaches crescent (hilal) sighting through games and interactive simulations.
- Makes Islamic astronomy easy to understand for anyone, no science background needed.
- Personal project; comes from my Falak (Islamic astronomy) certification at UniSZA.

Telegram Firewall WHMCS Bot — Private Automation Project

Python · Telegram Bot API · WHMCS · Hetzner Cloud · SQLAlchemy · Alembic · Docker

- A Telegram bot that manages hosting services and cloud servers from chat.
- Python, WHMCS billing integration, SQLAlchemy/Alembic migrations, Docker, deployed on Hetzner.
- Routine tasks are automated; sensitive actions still need explicit confirmation.

RESEARCH INTERESTS

- How to run AI agents safely in production, especially when several work together.
- AI in government and public-safety analytics.
- Automation designs where a human stays accountable and every decision can be audited.
- I read ML and LLM papers regularly to keep my work current.

COMMUNITY ENGAGEMENT

Projek Baju Raya — Volunteer Coordinator

Annual Ramadan Initiative

- Every Ramadan, I organise the collection and delivery of new baju raya to orphanages and welfare homes.
- Handle the logistics and volunteer teams across several campaigns each year.
